

Ideation Phase

Empathize & Discover

Date	13 July 2026
Team ID	SWTID-2026-9658
Project Name	Customer Registry
Maximum Marks	4 Marks

Empathy Map Canvas Profile: Customer Care Registry User:

1. What does the user THINK AND FEEL?

- **Preoccupations:** "Will my issue actually get resolved this time, or will it be forgotten?"
- **Worries:** Anxious about whether their tracking data is secure or if their complaints are being ignored
- **Aspirations:** Looking forward to a clear, milestone-based system where progress is visible and transparent.

2. What does the user HEAR?

- **From Friends & Colleagues:** "That company has terrible support; your complaints get lost in disconnected channels."
- **From Managers/Bosses:** "We are losing customer loyalty because our support tools are slow and outdated."
- **From Market Influencers:** "Modern support applications should offer real-time notification loops."

3. What does the user SEE?

- **Environment:** Cluttered, non-responsive support forms that don't fit standard laptop or mobile viewports.
- **Market Alternatives:** Competitor platforms offering sleek, single-page self-service dashboards.
- **Daily Obstacles:** Support agents wasting time manually looking up old spreadsheets to find a user's problem history.

4. What does the user SAY AND DO?

- **Public Attitude:** "I just want a simple, clean form where I can submit a ticket and find it later."
- **Behavior:** Constantly refreshes their email spam folders checking for ticket status updates out of pure frustration.
- **Actions:** Reluctantly fills out long, complex complaint fields, but drops off mid-way if the application freezes.

5. PAIN (Fears, Frustrations, & Obstacles)

- **Frustrations:** Tickets disappearing into a "black box" with zero immediate status feedback.

- **Obstacles:** Slow system response times and interfaces that freeze during attachments or submissions.
- **Fears:** Critical service complaints getting completely lost due to database downtime or lack of data schema validation.

6. GAIN (Wants, Needs, & Success Metrics)

- **Wants:** A fast, secure, and responsive MERN-stack platform to easily submit complaints and filter past logs.
- **Measures of Success:** Receiving an automated confirmation notice immediately upon successful submission.
- **Core Need:** A reliable registry that respects their time and streamlines communication with the support team
