

Project Design Phase
Problem – Solution Fit Template

Date	13 July 2026
Team ID	SWTID-2026-9658
Project Name	Customer Registry
Maximum Marks	2 Marks

Section A: Define Customer Segment & Constraints (Pink Row)

1. CUSTOMER SEGMENT(S) [CS]

- Who is your customer?
- Everyday digital consumers, modern web application users, and internal customer support administrators handling service issues.

2.CUSTOMER CONSTRAINTS [CC]

- What constraints prevent your customers from taking action or limit choices?
- Limited time to navigate complex systems, varying technical literacy, fluctuating internet connectivity speed, and accessing the registry primarily from smaller mobile device screens.

○ **3. AVAILABLE SOLUTIONS [AS]**

- *Which solutions are available when they face the problem? What are the pros & cons?*

- **Solution 1: Manual spreadsheet tracking or pen-and-paper notes.**

- *Pros:* Free and easily accessible.
- *Cons:* Easily lost, lacks status updates, and impossible to scale or search efficiently.

- **Solution 2: Sending standard text emails directly to a generic corporate support inbox.**

- *Pros:* Familiar to everyone.
- *Cons:* Emails often map to a "black box" where ticket routing histories are completely hidden.

Section B: Focus on Problems, Behavior, & Root Cause (Orange Row)

4. JOBS-TO-BE-DONE / PROBLEMS [J&P]

- Which jobs-to-be-done or problems do you address?
- Seamlessly submitting a clear technical complaint form and easily filtering through past submission records to verify real-time tracking progress.

5.PROBLEM ROOT CAUSE [RC]

- What is the real reason that this problem exists?
- The company lacks a modern, centralized, and automated registry web database to link complaints seamlessly to specific support agent queues.

6. BEHAVIOUR [BE]

- What does your customer do to address the problem and get the job done?
- Directly Related: Checking email spam folders for missing updates and calling helplines repeatedly to trace simple reference logs.
- Indirectly Associated: Complaining on company social media pages or public feedback channels to force a quick response loop.

Section C: Triggers, Emotions, Channels, & Solution (Green Row)

7. TRIGGERS [TR]

- What triggers customers to act?
- Encountering a sudden technical application failure, receiving a delayed package delivery, or reading an explicit billing notification error.

8. EMOTIONS: BEFORE / AFTER [EM]

- How do customers feel when they face a problem and afterwards?
- Before: Frustrated, anxious, and ignored by the brand due to a total lack of communication infrastructure.
- After: Reassured, confident, and satisfied once a clear automated validation notice shows their ticket has been cataloged.

9. CHANNELS of BEHAVIOUR [CH]

- What kind of actions do customers take online and offline?
- 9.1 ONLINE: Navigating web portals, submitting contact forms, checking browser histories, and monitoring digital notification center feeds.
- 9.2 OFFLINE: Making voice phone calls to service hotlines or visiting physical retail customer counters to locate help.

10. YOUR SOLUTION [SL]

- What is the proposed system design?
- A highly secure, automated, and single-page MERN Stack Customer Care Registry application featuring direct form submission processing, quick search log filters, and dynamic dashboard ticket status tracking
