

User Acceptance Testing (UAT) Template

Date	13 July 2026
Team ID	SWTID-2026-9658
Project Name	Customer Registry
Maximum Marks	

Project Overview:

- Project Name: Customer Care Registry
- Project Description: A responsive, single-page MERN Stack application designed to let customers securely register, submit service complaints, and transparently track ticket status updates in real-time, replacing manual tracking systems.
- Project Version: 1.0.0
- Testing Period: 10 July 2026 to 13 July 2026

Testing Scope:

- **Features and Functionalities to be Tested:**
 - Secure user registration, login authentication, and JWT authorization.
 - Ticket creation form validation (handling empty fields and file attachments).
 - Real-time ticket queue updates, status filtering, and search functionality on the dashboard.
- **User Stories / Requirements to be Tested:**
 - *As a customer*, I want to submit a clear support ticket and easily track its progress.
 - *As a customer*, I want immediate visual confirmation that my issue is registered.
 - *As an agent*, I want to filter and search the database queue to manage tickets efficiently.

Testing Environment:

- **URL/Location(Local):** http://localhost:5173/

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify customer can submit a ticket with valid inputs	Log in as a customer. 2. Fill out the "Job/Complaint" fields. 3. Click "Submit".	Ticket is successfully created and written to MongoDB; success toast displays.	Ticket created; dynamic success notification displayed instantly.	Pass
TC-002	Verify ticket form field validation behavior (Negative)	1. Log in as a customer. 2. Leave all complaint fields empty. 3. Click "Submit".	Form highlights errors and blocks the API call; no empty ticket is generated in MongoDB.	Page blocked submission; red helper text displayed under empty inputs.	Pass
TC-003	Verify real-time status filtering and search	1. Log in as a customer. 2. Navigate to the history log. 3. Search for a specific ticket ID or filter by status.	The log displays only the corresponding ticket matches instantly without a full page reload.	List correctly filtered within 100ms; reactive UI dynamically updated matching records.	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
--------	-----------------	--------------------	----------	--------	---------------------

BG-001	Page crash when attempting to upload a non-image file attachment	1. Go to "Create Ticket". 2. Drag in a .txt file. 3. App crashes and shows a blank screen.	High	Closed	Fixed by introducing express-validation constraints on file extensions; displays alert now.
BG-002	Expired JWT session crashes client side instead of routing to Login	1. Let browser sit idle. 2. Refresh dashboard. 3. Blank screen is rendered.	Medium	Closed	Added an Axios interceptor to automatically catch expired tokens and redirect to

Notes:

- **Balanced Testing:** Ensure that all test cases cover both positive (happy path validation) and negative (error handling validation) scenarios.
- **Frictionless UI Feedback:** Encourage testers to provide detailed feedback, including any suggestions for improvement to optimize dashboard load speed.
- **Traceability:** Bug tracking must include details such as severity, status, and steps to reproduce for our backend developers.
- **Deployment Guardrails:** Obtain sign-off from both the project manager and product owner before proceeding with live production deployment.
