

Project Design Phase-II

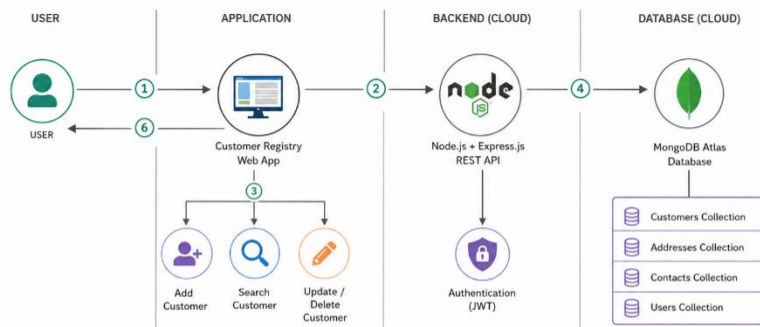

Data Flow Diagram & User Stories

Date	31 January 2025
Team ID	SWTID-2026-9658
Project Name	Customer registry
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Flow

1. User accesses the Customer Registry application and logs in.
2. The application sends requests to the backend REST API.
3. User can Add, Search, Update or Delete customer information.
4. The backend processes the request and performs CRUD operations on MongoDB Atlas.
5. The backend authenticates the user using JWT and validates the request.
6. The application receives the response from the backend and displays the result to the user.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
Customer (Web user)	Dashboard View	USN-2	As a user, I want to filter my past logs to monitor real-time processing milestones so that I know my ticket isn't lost.	Filtering runs instantly on the reactive client interface without reloading the whole web page.	Medium	Sprint-2
Support Agent	Status Overrides	USN-3	As an agent, I can modify the ticket status to 'In Progress' or 'Resolved' and attach resolution details.	Status updates instantly alter the customer's dashboard tracking milestone status.	High	Sprint-1
Support Agent	Ticket Fulfillment	USN-4	As an agent, I can view an organized queue of all open tickets sorted by submission timeline order	Queue renders all vital tracking fields clearly across a standard workspace screen layout.	High	Sprint-1
Customer Care Executive	Ticket Management	USN-5	As an executive, I can view a centralized queue of all incoming complaints assigned to my department	The interface provides a clear list view of open tickets sorted by submission timestamp.	High	Sprint-1
Customer Care Executive	Ticket Processing	USN-6	As an executive, I can update a ticket's status from 'Pending' to 'In Progress' or 'Resolved' and add text updates.	Status updates modify the MongoDB database record and immediately reflect on the user's dashboard.	High	Sprint-1
Administrator	Access Controls	USN-7	As an administrator, I can change authorization roles to promote regular users into formal Support Agent staff roles.	Access changes modify database document roles securely and dynamically enforce backend routing permissions.	Low	Sprint-2
