

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	13 July 2026
Team ID	SWTID-2026-9658
Project Name	Customer Registry
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Complaint Management	Ticket Creation via a single-page web form File Attachment processing (uploading evidence logs/images) Automated database validation to block empty submissions
FR-4	Dashboard & Tracking	Real-time tracking history display for customers Multi-parameter Search and Filter tools for agents Role-based status updates (Pending, In Progress, Resolved)

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The presentation layer features a responsive single-page web client optimized for standard desktop, laptop, and mobile device viewports.
NFR-2	Security	Client-server communications are protected using secure HTTP router endpoints, and backend resource authorization is verified via JSON Web Tokens (JWT).
NFR-3	Reliability	The database handles exceptions smoothly using backend input validation logic, ensuring zero lost tickets or structural crashes during application field errors
NFR-4	Performance	The system relies on reactive state updates to perform instant ticket status sorting and log list filtering within 100 milliseconds without page reloads.
NFR-5	Availability	The cloud backend application handles continuous background verification tasks, maintaining near-

		constant web interface availability for remote consumer access.
NFR-6	Scalability	Powered by a flexible MongoDB document database schema, the logic layer scales horizontally to comfortably store millions of user authentication records and registry ticket histories.
